

WORKBOOK—SECTION TWO

Designing Your AAA Sequence

Use this section to map AAA at both scales: the full experience and the next lesson.

Name of Experience / Module / Pipeline:

Stage 1: Application

7. What real thing will the learner touch, test, make, or play with immediately?

The learner will immediately create and edit a simple webpage using HTML and CSS. They will be able to open the page in a browser and see their changes.

8. What productive friction do you want them to encounter here? What misconception should fail safely?

The learner may make small coding mistakes and see that the webpage does not work as expected. This helps them understand that coding requires testing and fixing errors instead of expecting everything to work perfectly the first time.

Stage 2: Action

9. What are the 3-5 core concepts, definitions, or moves that should arrive only after Stage 1?

Basic HTML structure

HTML elements and tags

CSS styling

Linking CSS to HTML

Testing and debugging code

10. How will the learner use those ideas to refine what they already began?

The learner will use HTML and CSS concepts to improve their original webpage. They can organize the content, change the appearance, fix errors, and make the page easier to use.

Stage 3: Amplification

11. What bigger frameworks, professional practices, or collaborative contexts will open here?

The learner can begin using professional practices such as organizing files, using Git and GitHub, testing websites, documenting their work, and getting feedback from others.

12. How does AAA work at the macro scale of the full experience and at the micro scale of one lesson or node?

At the macro scale, the learner starts by creating a webpage, learns the concepts needed to improve it, and eventually applies those skills to larger projects. At the micro scale, each lesson can follow the same pattern: try something first, learn the concept, and then use it to improve the project.
